	ACT Emergency Services Agency **ECC SITUATION REPORT**		
	INCIDENT: Mitchell HAZMAT		
PREPARED FOR OPERATIONAL PERIOD		FROM: 1230	TO:1500
SITUATION REPORT NUMBER		2	
ATTACHMENTS			

Status: Contained

Lead Agency: ACT Fire Brigade

Description of Incident: Mitchell HAZMAT. Fire and explosions at oil recycling facility at Dacre Street Mitchell. 11 ACTFB Units on scene. Fire & Rescue NSW also assisting. 50 personnel in attendance.

Current Impacts: Neighbouring unoccupied industrial premises.

Community

	Members of the Community	Incident Personnel
Deaths	*Nil*	*Nil*
Injuries	Nil *	*Nil*
Unaccounted	*Nil*	*Nil*
Evacuees	***120 at height of emergency*	*Nil*

- *Note: One security guard was admitted to Calvary Hospital for observation following possible smoke inhalation.
-
- **Note:197 people have accessed Dickson College evacuation centre. All evacuees have now left.

***Property:* Fire contained within premises but has impacted on adjoining unoccupied industrial premises. EPIC is now open.**

Infrastructure: *Exclusion zone of 300m which includes the Mitchell Industrial area.*
Road closures: Gungahlin Drive is closed between Barton Highway and Oodgeroo Avenue.
Flemington Road is closed between Randwick Road and Wells Station Road.
Gungahlin Cemetery and Crematorium closed for the day.
All Northside schools remain closed for the day.
Dickson College will remain open until 1700.
Action Buses running as normal except for exclusion zone.

Environment: Run off water and foam from fire fighting operations into nearby water ways has been captured within the concrete lined storm water system/ Sullivans creek. Water samples are being taken from Sullivans

Creek and Lake Burley Griffin but results will not be known for 24hours. These areas will stay closed until further notice.
FRNSW are conducting atmospheric testing onsite. EPA conducting water quality testing
Wind is currently driving smoke plume in a North Easterly direction.

Warnings and Public Information undertaken
Emergency Alert sent via phone to affected residents at 0330 this morning.
ESA Website along with ACT Policing twitter sites constantly updated.

[redacted]

Forecast Weather and Threat Analysis
Forecast for today: Winds west to northwesterly averaging up to 30 km/h.
Strong North westerly winds in the Gungahlin area pushing smoke plume into bordering NSW areas.
Incident Controller has liaised with NSW DEMOs regarding smoke plume potential.

Response Objectives and Tasking

People: Control access to site to operational personnel only.
ACTAS Warning: Possibility of delayed Pulmonary Oedema.
Possible caustic ash concern to be addressed.

Property: Continue containment to Recycling facility site. Limit damage to adjoining buildings and extinguish fire.

Infrastructure: Maintain current exclusion zone including closure of Crematorium and Cemetery and existing road closures. ACTION buses are now running as per normal except for the exclusion zone.

Environment: Continue closure of Lake Burley Griffin and Sullivans Creek. Ongoing monitoring of waterways by EPA. Contaminated material to be stored at a site in Fyshwick until further notice.

Warnings and Public Information - Proposed

[redacted]

Response Agency

IMT Activated at:
IMT activated approximately 0230

Public Information

PICC Activated at:

Not applicable PICC not activated

Supporting Agencies

ECC Activated at: Fairbairn at approximately 0330

Agencies in attendance: Chief Minister _____ell; Director General JACS _____.;Commissioner ESA _____ ACTFB; ACTAS; ACT Policing; ACT Health; EPA; ActewAGL; TAMS; Dept Housing &Community Services; Dept Education; SEMB;

ACTAS: Have a unit on the scene.

ACTFB: Currently on sight, within the fire contained to the original building Air monitoring still being undertaken at the site. Renewed foam attack on fire will take place at approximately 1400. Foam being brought in from NSW

ACTRFS: Providing logistics support to as required.

ACTSES: Assisting in ECC as required.

ACT POLICE: Road blocks in place in Mitchell: Gungahlin Drive between Oodgeroo Road and the Barton Highway, Flemington Road between Sandford Street and Wells station Road

RECOVER: There were 25 horses and about 120 people at the evacuation centre all of which have now left.

EDUCATION: All schools north of the lake will be closed today only.

TAMS: The business has arranged for 'sucker' trucks for clean up. Bunds are in place to collect any run-off. There has been some chemical spillage, which has made its way through the stormwater system and into Flemington Ponds. Sullivans Creek and Lake Burley Griffin remain closed until further notice.

ACTION: Buses have returned to schedule except for the current exclusion zone in Mitchell. Normal school bus services will be running this afternoon. Buses that usually travel along Flemington Road have diverted to Gundaroo Drive and the Barton Highway.

CHIEF VET: Contingency plans in place in case things flare up again. There are still horses at EPIC and staff on standby to assist with the movement of horse if required. Roadblock shifted further out so people cannot access racecourse nearer to opening of showground.

HEALTH: Police Escorts have been arranged from Mitchell to the hospitals for necessary supplies.

SEMB: Postal Services in North Canberra disrupted.

	ACT Emergency Services Agency **ECC SITUATION REPORT**
	INCIDENT: Mitchell HAZMAT

PREPARED FOR OPERATIONAL PERIOD	FROM: 0600	TO:1400
SITUATION REPORT NUMBER	4	
ATTACHMENTS		

CURRENT SITUATION

Status: Fire Extinguished – monitoring.

Lead Agency: ESDD - Environment Protection Authority (EPA).

Description of Incident: Fire at Mitchell extinguished. On site monitoring, sampling and recovery is being conducted. Remains a HAZMAT incident until all testing and decontamination completed.

Current Impacts: Road, Government facilities and business closures in the exclusion zone.

Community

	Members of the Community	Incident Personnel
Deaths	*Nil*	*Nil*
Injuries	*1**	*Nil*
Unaccounted	*Nil*	*Nil*
Evacuees	***197at height of emergency*	*Nil*

- * possible smoke inhalation.
- **Note: 197 people have accessed Dickson College evacuation centre. All evacuees have now left.

roperty: Fire extinguished but has impacted on adjoining unoccupied industrial premises. EPIC is now open.

Infrastructure: Exclusion zone of 300m which includes the Mitchell Industrial area.
Road closures:
Wells Station road between Flemington Road and Gungahlin Drive.
Sandford St between Gungahlin Drive and Flemington Road.
Flemington Road between Sandford Road and Wells Station road.
Action Buses running as normal except for exclusion zone.

Environment: EPA is conducting significant soil, structure and water sampling with the cooperation of NSW EPA. Samples are being collected with the assistance of ACTSES. Plume modelling is being undertaken to ascertain any further testing sites. Caustic ash identified on a number of surfaces (cars and buildings) within Mitchell. Runoff water and foam from fire fighting operations into nearby water ways has been captured within the concrete lined storm water system/ Sullivans creek. Some sample results may be available later on this evening, with more results available on Sunday. These areas will remain closed until further notice.

Warnings and Public Information undertaken

ESA Website along with ACT Policing twitter sites constantly updated.
Draft product information has been developed by ACT Health.
Draft cleanup strategy is being developed by EPA; dependent on testing results.
Both of these respective sets of information will be tabled by respective Director Generals at 1000 SEMSOG meeting on Sunday 18 September.

PROGNOSIS

Forecast Weather and Threat Analysis

Forecast for Saturday: Sunny. Winds west to northwesterly averaging up to 30km/hour.

Sunday outlook: Sunny. Winds westerly to north westerly av. 10-20km/hour becoming light later in the evening.

Monday outlook. Mostly sunny. Winds mainly northeasterly averaging up to 30km/h tending west to northwesterly 30 to 35 km/h around midday.

Tuesday outlook: Mostly sunny. Winds west to northwesterly averaging up to 35 km/h.

Response Objectives and Tasking

People: Control access to site to operational personnel only. Possible caustic ash concern to be addressed.

Property: Monitor

Infrastructure: Maintain current exclusion zone.

Environment: Continue closure of Lake Burley Griffin and Sullivans Creek. Ongoing monitoring of waterways by EPA. Contaminated material to be stored at a site in Fyshwick until further notice.

Warnings and Public Information - Proposed

RESOURCES

Response / Lead Agency

Lead Agency: Handover from ACTFB to ESDD -EPA as lead agency conducted 1200 Sat 17 Sep.

Public Information

PICC Activated at: Fairbairn

Supporting Agencies

ECC Activated at: Fairbairn at approximately 0330 Fri 16 Sep and remains active with EPA as lead agency and ACTFB providing on site monitoring and recovery. Agencies represented are ESA, ACT Health and ESDD.

Agencies in attendance:

ACTAS: Ambulance crew on site until 1700.

ACTFB: Currently on site and monitoring - 8 x ACTFB vehicles and 14 ACTFB.

ACTRFS: Providing Logistic, Planning and Emergency Coordination tasks at ECC.

Incident Report

Fire Brigade Reference: 004629-12022005-0 **Date & Time of Fire** 12/02/2005 05:15:43

Address:

MITCHELL

Description of Incident:

On approach to the incident from Flemington Road the crew observed a small fire in rear yard facing Darling Street. On arrival it was apparent that some form of equipment being stored at the site was alight. The fire involved a cylindrical object approximately 2m in height by .4m wide on top of a square base approximately 40cm2. The fire produced yellow/orange flames on the outside of the unit, and blue flames inside - there was a small 30cm x 30cm hole in the side of the unit which allowed a view inside. These observations took place from the rear gate of Kelly's Body approximately 25 m from the fire. A low volume plume of smoke issued upwards at an angle of about 70' - there was no wind. Liaised with Station Officer who had arrived in Ainslie's pumper. Liaised with District Officer EPA was notified. Gained access by cutting chain at rear gate adjascent to bulk tanks. Firefighters wore breathing apparatus and approached the fire from the leeward side to report on the extent of the fire. They observed that the unit had a power supply and a fan was running. Foam was applied from a distance in broken jets in an attempt to extinguish the fire without success. Firefighters and re-entered the yard from the leeward side and isolated power by switching of at the unit. A constant jet of foam was then applied which extinguished the fire. Run-off was contained within the site. Two attempts were made to contact the owner on an after hours emergency number posted on the bulk tanks - messages left on answering machine. The unit retained much heat after extinguishment and continued to issue steam/vapour. Hazmat crew monitored run-off for contaminants but nothing detected. Police ensured no entry to adjacent buildings and blocked the street. Liaised with EPA, who provided information on the site. Owner eventually contacted and arrived at scene to provide information on the product involved and the process. said that the affected unit did contain PCB's in the range of 50 parts per million. He said he had used this process before on other types of tranformers but this was the first time with this type. The process takes several days of applying fan forced high temperature air into the unit. Incident handed over to relieving crews at around 0800hrs. Liaised with District Officer and Station Officer in attendance. Station Officer reported the following:

Hazmat crew arrived following change-over. Firefighters and viewd the immediate area of the fire for residual contaminant. Firefighters and utilized monitoring equipment (PID and 4 head detector) in immediate area and in adjacent buildings and found the atmosphere clear and inhabitable. Firefighters Woodward and sial wore 'splash suits' and cleaned up a minor quantity of residue (approximately 1 to 2 litres)using vermiculite. The waste was contained in a brewers drum and after consultation with EPA and the owner the waste was left on site as the responsibility of the owner. In cosultaion with the surrounding area was washed down with water to remove foam residue from initial firefighting efforts. The site was handed over to EPA once and Stuart were satisfied with the safety of the area.

Address: Energy Services Environmental
20 WINCHCOMBE COURT
MITCHELL

Description of Incident:

Medical assist call to 3 men having been sprayed with oil and currently washing affected areas with water at Energy Services Environmental 20 Winchcombe Court Mitchell.

Upon arrival met by the Office Manager _____ who had the Chemical Data sheets for all chemicals stored on the premises and informed me that 3 workers had been sprayed with oil that contained Sodium Hydroxide making the oil caustic causing burns to the faces of the 3 men. All 3 men where currently irrigating affected areas with water no entry was made at this time.

Entry to the premises was made after the Operations Manager _____ assured that all traces of PCB's had been removed from the oil and the Sodium Hydroxide was by product in the process to remove the PCB's. I made entry through the roller door at the rear of the premises and found 3 males irrigating affected areas with water over hand basins in the ablutions area of the workshop. The amount of oil spilt appeared to be about 2 litres on a concrete floor covering approximately 10 m2. The spill area was clear of the roller door allowing safe access for Ambulance crews to treat casualties.

_____ the Field Services Manager was also on scene and provided information on the process of removing PCB's from the oil. He also informed me that he had arranged for a crew from the other depot to clean the spill if required. In consultation with District Officer _____ and Station Officer _____ it was agreed that they could conduct the clean up of the Work Cover was requested and Mr Tim Cody attended to conduct investigations into the incident. All relevant information was given to _____ and the scene left with him to complete further investigation.

Address: CSI (PCB dechlorination plant)
SANDFORD STREET
MITCHELL

Description of Incident:

On arrival I was met by the manager _____) who informed me that it was only a rag that was alight and that his employees had already extinguished it. I went to inspect the site, saw the rag which had been extinguished and was shown the heating pipe on which it had been sitting.

An employee was still using a fire hose reel to put water on the side of 2 smoking 200 litre drums. I asked _____ if e smoke coming from the drum was normal, he said that it was not. He said that the drum contained vemiculite which ..ad been used to absorb clean oil (not contaminated with PCB), and that it had overheated and caught alight. The drums were part of a drying apparatus used to reclaim the last of the clean oil. _____ told me that they would take care of this smouldering fire.

I disagreed, and told him that we would extinguish the fire. He did not want us to open the drums as he was worried about the heat. I instructed FFs _____ cool the outside of the drums with a high pressure hose. After several minutes the FFs donned breathing apparatus and opened the drums, they discovered the drums contained old oil filters, not vermiculite.

_____ expressed surprise that the drums contained oil filters and informed me that they should not have been placed in this particular drying unit as it runs at too high a temperature for these items. He could not explain how they ended up in this unit or which employee may have been responsible.

The FFs removed the filters from the drums and ensured they were extinguished.

I informed _____ that I would be contacting ACT Workcover in relation to this incident for the following reasons;

1. The drying process runs overnight without supervision
2. His inability to explain how the filters ended up in the wrong drying unit
3. The potential for disaster if a further fire occurred given the fact that there is large amounts of oil stored on the premises, both clean and contaminated.
4. The fact that in my opinion he tried to discourage the ACTFB from extinguishing the fire, and appeared to be less than truthful when facts contrary to what he told me were revealed.

On return to station I informed _____ of the situation and my intention to contact ACT Workcover. I contacted the on call officer for Workcover, _____ and informed him of the situation and my concerns.

Incident Report

Fire Brigade Reference: 030708-13092006-0 **Date & Time of Fire** 13/09/2006 06:56:04

Address: CSI (PCB dechlorination plant)

Fire Reported to fire brigade Comcen by: Resident, occupier, employee
Via: 000 Call

Date & Time of Arrival of First unit on scene: B2
13/09/2006 07:03:38

Senior officer attending call:

Description of the Premises, Vehicle, Property: CSI is a PCB dechlorination plant. Fire was external to building in a drying drum.

Owner of the Premises, Vehicle, Property: [redacted]
CSI
Mitchell

Estimated value of damage($): 0

Is the property insured?: Insurance not applicable

Origin of the fire: Not classified above

Cause of the fire: Unattended

Police Notification: No

Police Attendance: No

Coroner Use Only

Police Attendance : Yes / No

Suspicious Circumstance : Yes / No

Did Coroner Attend? : Yes / No

Scene handed to Police?: Yes / No
At:
To:
Coroner:

Compressed air equipment can always be used instead of a filter respirator. It should always be used if the gas concentrations are in excess of 0.5% by volume. Should be used for physically strenuous or long-duration work.

N.B. Compressed-air supplied equipment should not be used where there is danger of loss of consciousness or asphyxiation.

Advice concerning the selection of filters and the method of use can always be obtained directly from Sundström Safety AB.

Pre-filter SR 221 should always be used. N.B. This pre-filter can never replace particle filter SR 510.

These recommendations are derived from a number of different sources and they follow the current Swedish regulation. Note that there can be national differences in the regulations for use of respiratory protective equipment.

Notes:
1. Combinations of filters shall be used.
2. Combination filter SR 299-2 ABEK1 HG P3 Type Hg - maximum use time 50 hours.
3. Full face mask should be used.
4. Carcinogenic
5. Skin adsorbing
6. Regarded as a sensitizer

Phosgene

Section 1 - CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME
phosgene

SYNONYMS
C-O-Cl2, "carbonic acid dichloride", "carbonyl chloride", "chloroformyl chloride", "carbon oxychloride", "carbon dichloride oxide", diphosgene, "Combat gas", CG

PROPER SHIPPING NAME
PHOSGENE

PRODUCT USE
■ The use of a quantity of material in an unventilated or confined space may result in increased exposure and an irritating atmosphere developing. Before starting consider control of exposure by mechanical ventilation. Organic synthesis, especially of isocyanates, polyurethane and polycarbonate resins, carbamates, organic carbonates and chloroformates, pesticides, herbicides and dye manufacture.

Section 2 - HAZARDS IDENTIFICATION

STATEMENT OF HAZARDOUS NATURE
HAZARDOUS SUBSTANCE. DANGEROUS GOODS. According to NOHSC Criteria, and ADG Code.

CHEMWATCH HAZARD RATINGS

	Min	Max
Flammability:	0	
Toxicity:	4	
Body Contact:	3	
Reactivity:	2	
Chronic:	2	

Min/Nil=0
Low=1
Moderate=2
High=3
Extreme=4

POISONS SCHEDULE
None

RISK	SAFETY
■ Reacts violently with water.	• Never add water to this product.
■ Very toxic by inhalation.	• Keep locked up.
■ Causes burns.	• Do not breathe gas/fumes/vapour/spray.
■ Risk of serious damage to eyes.	• Avoid contact with skin.
■ Risk of explosion if heated under confinement.	• Avoid contact with eyes.
■ Skin contact may	• Wear suitable protective clothing.

229

produce health damage*.

■ Cumulative effects may result following exposure*.

* (limited evidence).

- In case of insufficient ventilation, wear suitable respiratory equipment.
- Wear suitable gloves.
- Wear eye/face protection.
- Keep container dry.
- Use only in well ventilated areas.
- Keep container in a well ventilated place.
- Keep in a cool place.
- Keep container tightly closed.
- This material and its container must be disposed of in a safe way.
- Keep away from food, drink and animal feeding stuffs.
- Take off immediately all contaminated clothing.
- In case of contact with eyes, rinse with plenty of water and contact Doctor or Poisons Information Centre.
- In case of accident or if you feel unwell IMMEDIATELY contact Doctor or Poisons Information Centre (show label if possible).
- This material and its container must be disposed of as hazardous waste.
- In case of accident by inhalation: remove casualty to fresh air and keep at rest.

Section 3 - COMPOSITION / INFORMATION ON INGREDIENTS

NAME	CAS RN	%
phosgene	75-44-5	> 99

Section 4 - FIRST AID MEASURES

SWALLOWED

- Not considered a normal route of entry.

EYE

- If product comes in contact with eyes remove the patient from gas source or contaminated area.
- Take the patient to the nearest eye wash, shower or other source of clean water.
- Open the eyelid(s) wide to allow the material to evaporate.
- Gently rinse the affected eye(s) with clean, cool water for at least 15 minutes. Have the patient lie or sit down and tilt the head back. Hold the eyelid(s) open

and pour water slowly over the eyeball(s) at the inner corners, letting the water run out of the outer corners.

SKIN
If skin or hair contact occurs:

- Immediately flush body and clothes with large amounts of water, using safety shower if available.
- Quickly remove all contaminated clothing, including footwear.
- Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre.
- Transport to hospital, or doctor.

INHALED

- Inhalation of vapours or aerosols (mists, fumes) may cause lung oedema.
- Corrosive substances may cause lung damage (e.g. lung oedema, fluid in the lungs).
- As this reaction may be delayed up to 24 hours after exposure, affected individuals need complete rest (preferably in semi-recumbent posture) and must be kept under medical observation even if no symptoms are (yet) manifested.
- Before any such manifestation, the administration of a spray containing a dexamethasone derivative or beclomethasone derivative may be considered.

- Following exposure to gas, remove the patient from the gas source or contaminated area.
- NOTE: Personal Protective Equipment (PPE), including positive pressure self-contained breathing apparatus may be required to assure the safety of the rescuer.
- Prostheses such as false teeth, which may block the airway, should be removed, where possible, prior to initiating first aid procedures.
- If the patient is not breathing spontaneously, administer rescue breathing.

NOTES TO PHYSICIAN
■ Depending on the degree of exposure, periodic medical examination is indicated. The symptoms of lung oedema often do not manifest until a few hours have passed and they are aggravated by physical effort.
For phosgene:

- Toxic effects of phosgene may be delayed and any person exposed to phosgene should be medically observed for onset of symptoms for at least 24 hours.
- In the absence of special detector badges worn by workers, there is no way of knowing the extent of phosgene exposure. But if one waits for the appearance of symptoms, pulmonary oedema may be lethal. Consequently, any exposed person must be treated as if the exposure is life threatening. The person should be kept at rest and given a glucocorticoid anti-inflammatory medication, and should be given oxygen-enriched air.

[Patty's]<.

Section 5 - FIRE FIGHTING MEASURES

EXTINGUISHING MEDIA

- Water spray or fog.
- Foam.
- Dry chemical powder.
- BCF (where regulations permit).

FIRE FIGHTING

GENERAL

- Alert Fire Brigade and tell them location and nature of hazard.
- May be violently or explosively reactive.
- Wear full body protective clothing with breathing apparatus.
- Fight fire from a safe distance, with adequate cover.

FIRE/EXPLOSION HAZARD

- Containers may explode when heated - Ruptured cylinders may rocket
- May burn but does not ignite easily.
- Fire exposed cylinders may vent contents through pressure relief devices thereby increasing vapour concentration.
- Fire may produce irritating, poisonous or corrosive gases.

Decomposition may produce toxic fumes of: carbon monoxide (CO), carbon dioxide (CO2), hydrogen chloride, phosgene, other pyrolysis products typical of burning organic material.
Contains low boiling substance: Closed containers may rupture due to pressure buildup under fire conditions.
FIRE INCOMPATIBILITY

- Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result

HAZCHEM
2XE

Section 6 - ACCIDENTAL RELEASE MEASURES

MINOR SPILLS

- Drains for storage or use areas should have retention basins for pH adjustments and dilution of spills before discharge or disposal of material.
- Check regularly for spills and leaks.

- Avoid breathing vapour and any contact with liquid or gas. Protective equipment including respirator should be used.
- DO NOT enter confined spaces were gas may have accumulated.
- Increase ventilation.

- Clear area of personnel.

Refer to **MAJOR SPILLS**.
MAJOR SPILLS

- Clear area of all unprotected personnel and move upwind.
- Alert Emergency Authority and advise them of the location and nature of hazard.
- Wear full body clothing with breathing apparatus.
- Prevent by any means available, spillage from entering drains and water-courses.

- Remove leaking cylinders to a safe place.
- Fit vent pipes. Release pressure under safe, controlled conditions
- Burn issuing gas at vent pipes.

- DO NOT exert excessive pressure on valve; DO NOT attempt to operate damaged valve.

Remove leaking cylinders to a safe place. Release pressure under safe controlled conditions by opening the valve. Ammonia and sodium hydroxide solution have been reported to be useful in neutralising phosgene gas.
Contain liquid spills with sand, earth or vermiculite.
Use soda ash or slaked lime to neutralise.

Personal Protective Equipment advice is contained in Section 8 of the MSDS.

Section 7 - HANDLING AND STORAGE

PROCEDURE FOR HANDLING

- Consider use in closed pressurised systems, fitted with temperature, pressure and safety relief valves which are vented for safe dispersal.
- The tubing network design connecting gas cylinders to the delivery system should include appropriate pressure indicators and vacuum or suction lines.
- Fully-welded types of pressure gauges, where the bourdon tube sensing element is welded to the gauge body, are recommended.
- Before connecting gas cylinders, ensure manifold is mechanically secure and does not containing another gas. Before disconnecting gas cylinder, isolate supply line segment proximal to cylinder, remove trapped gas in supply line with aid of vacuum pump

- DO NOT transfer gas from one cylinder to another.

SUITABLE CONTAINER

- Cylinder:
- Ensure the use of equipment rated for cylinder pressure.
- Ensure the use of compatible materials of construction.
- Valve protection cap to be in place until cylinder is secured, connected.

STORAGE INCOMPATIBILITY

Phosgene

- decomposes slowly in water producing hydrochloric acid and carbon monoxide
- reacts violently with strong oxidisers, anhydrous ammonia, amines, isopropanol, chemically active metals, phenols silicon tetrahydride, powdered aluminium, potassium, sodium, lithium
- forms shock-sensitive materials with potassium
- is incompatible with tert-butylazidoformate, sodium azide

Acyl halides:

- tend to react violently with protic organic solvents, water, and the aprotic solvents, dimethylformamide and dimethyl sulfoxide.
- may react dangerously with ethers .
- may react violently or explosively with sulfoxides in the absence of diluent or other effective control of reaction rate; violent reactions may be explained in terms of exothermic polymerisation of formaldehyde which is formed under a variety of conditions by interaction of the sulfoxide with reactive halides.

- Avoid any contamination of this material as it is very reactive and any contamination is potentially hazardous

- Segregate from alcohol, water.

- Avoid strong bases.

- Avoid reaction with oxidising agents

PACKAGING MATERIAL INCOMPATIBILITIES

Chemical Name	Container Type
Chlorinated Glue	"Acetal (Delrinr)", "Cast iron", Neoprene

STORAGE REQUIREMENTS

- Outside or detached storage is preferred.

- Cylinders should be stored in a purpose-built compound with good ventilation, preferably in the open.
- Such compounds should be sited and built in accordance with statutory requirements.
- The storage compound should be kept clear and access restricted to authorised personnel only.
- Cylinders stored in the open should be protected against rust and extremes of weather.

Section 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

EXPOSURE CONTROLS

Source	Material	TWA ppm	TWA mg/m³	STEL ppm	STEL mg/m³	Peak ppm	Peak mg/m³	TWA F/CC	Notes

Australia Exposure Standards	phosgene (Phosgene)	0.02	0.08	0.06	0.25

PERSONAL PROTECTION

EYE

- Chemical goggles.
- Full face shield may be required for supplementary but never for primary protection of eyes
- Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lens or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59], [AS/NZS 1336 or national equivalent]

HANDS/FEET

- Neoprene gloves
- When handling sealed and suitably insulated cylinders wear cloth or leather gloves.

OTHER

- Overalls.
- PVC Apron.
- PVC protective suit may be required if exposure severe.
- Eyewash unit.

ENGINEERING CONTROLS

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

The basic types of engineering controls are:

Process controls which involve changing the way a job activity or process is done to reduce the risk.

Enclosure and/or isolation of emission source which keeps a selected hazard

"physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment.

Section 9 - PHYSICAL AND CHEMICAL PROPERTIES

APPEARANCE
Colourless, poisonous, non-flammable gas or volatile liquid with a characteristic sweet odour of musty hay. Slightly soluble in water and is hydrolysed to carbon dioxide and hydrochloric acid; corrosive in the presence of water and reacts with most metals to produce hydrogen. Freely soluble in benzene, toluene, glacial acetic acid, liquid hydrocarbons Note: All chlorinated hydrocarbon liquids in a fire evolve phosgene.

PHYSICAL PROPERTIES

Gas.
Does not mix with water.
Sinks in water.
Corrosive.
Toxic or noxious vapours/gas.
Reacts violently with water.

State	Compressed gas	Molecular Weight	98.92
Melting Range (°C)	-127.8	Viscosity	Not Applicable
Boiling Range (°C)	7.6	Solubility in water (g/L)	Immiscible
Flash Point (°C)	Not Applicable	pH (1% solution)	Not applicable
Decomposition Temp (°C)	Not Available	pH (as supplied)	Not applicable
Autoignition Temp (°C)	Not applicable.	Vapour Pressure (kPa)	162 @ 20 C
Upper Explosive Limit (%)	Not applicable.	Specific Gravity (water=1)	1.381 @ 20 C.
Lower Explosive Limit (%)	Not applicable.	Relative Vapour Density (air=1)	3.4 @ 20 C.
Volatile Component		Evaporation	Not

(% vol)	100	Rate	available

Section 10 - CHEMICAL STABILITY

CONDITIONS CONTRIBUTING TO INSTABILITY

- Presence of incompatible materials.
- Product is considered stable.
- Hazardous polymerisation will not occur.

For incompatible materials - refer to Section 7 - Handling and Storage.

Section 11 - TOXICOLOGICAL INFORMATION

POTENTIAL HEALTH EFFECTS

ACUTE HEALTH EFFECTS	CHRONIC HEALTH EFFECTS
■ Very toxic by inhalation.	■ Cumulative effects may result following exposure*.
■ Causes burns.	■ * (limited evidence).
■ Risk of serious damage to eyes.	
■ Skin contact may produce health damage*.	
■ * (limited evidence).	

TOXICITY AND IRRITATION

Asthma-like symptoms may continue for months or even years after exposure to the material ceases. This may be due to a non-allergenic condition known as reactive airways dysfunction syndrome (RADS) which can occur following exposure to high levels of highly irritating compound.

For phosgene:

In view of the extremely short half-life (0.026 seconds) in aqueous solutions, and the penetration into the tissues of the respiratory tract by phosgene gas, only minimal amounts of phosgene are distributed in the body and no significant retention of phosgene in the body is possible. The hydrolytic products of phosgene, hydrochloric acid and carbon dioxide, are disposed by the body through normal physiological processes.

Section 12 - ECOLOGICAL INFORMATION

This material and its container must be disposed of as hazardous waste.

Ecotoxicity

Ingredient	Persistence: Water/Soil	Persistence: Air	Bioaccumulation	Mobility
phosgene	LOW	LOW	LOW	HIGH

Section 13 - DISPOSAL CONSIDERATIONS

- Evaporate residue at an approved site.
- Return empty containers to supplier. If containers are marked non-returnable establish means of disposal with manufacturer prior to purchase.
- Ensure damaged or non-returnable cylinders are gas-free before disposal.

Section 14 - TRANSPORTATION INFORMATION

Labels Required: TOXIC GAS,CORROSIVE

Section 15 - REGULATORY INFORMATION

POISONS SCHEDULE
None

REGULATIONS
phosgene (CAS: 75-44-5) is found on the following regulatory lists;
"Australia - Queensland Hazardous Materials and Prescribed Quantities for Major Hazard Facilities","Australia Chemical Weapons (Prohibition) Act 1994 - Schedule 3","Australia Exposure Standards","Australia Hazardous Substances","Australia Inventory of Chemical Substances (AICS)","Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction (English)","International Council of Chemical Associations (ICCA) - High Production Volume List"

Section 16 - OTHER INFORMATION

■ Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.
A list of reference resources used to assist the committee may be found at:
www.chemwatch.net/references.

■ The (M)SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings.

Issue Date: 17-Apr-2009
Print Date:16-Sep-2011

ACTFB Detector Summary

PID – Photo Ionisation Detector

The PID is a compact monitor designed as a broadband VOC (volatile organic compound) gas monitor and data logger for work in hazardous environments. It monitors VOC's using a photo ionisation detector with a 9.9eV, 10.6eV, or 11.7eV gas discharge lamp.

It has the capability of continuous monitoring for up to 10 hours with a rechargeable and alkaline battery pack back up.

It gives real time measurements and activates alarm signals whenever the exposure exceeds the preset limits. The preset alarms limits are for STEL, TWA, low and high peak values.

The PID has the ability to automatically date and time stamp the data logged information.

The PID is calibrated to isobutylene and has a range of 0.1ppm – 10,000ppm which makes it ideal instrument for applications from environmental site surveying to Hazmat/Homeland security.

The ACTFB's PID's:

- Utilises a 10.6eV lamp
- Operated in "Hygiene" mode, which means that the monitor runs continuously once it is turned on

The FRNSW PID:

- Had a 11.7eV lamp installed

The instrument has the ability to detect the presence of over 300 volatile organic compounds, however, it is unable to identify a specific compound or range of compounds detected. In general, any compound with an ionisation energy lower than the lamp installed can be measured.

Enables a determination of 'safety' primarily for ur FFs but also the community.

Safe if under 0·5 (middle column)

QRae 4 head detector

The QRae 4 head detector is a multi gas monitor designed to provide continuous exposure monitoring of toxic gases – Hydrogen Sulphide and Carbon Monoxide; Oxygen and Combustible gases for workers in hazardous environments.

The instrument has the following ranges for the relevant sensors:

LEL (lower explosive limit)	0 – 100% of the LEL	5% first alarm
		10% second alarm
Oxygen	0 – 30%	19.5% low alarm
		23.5% high alarm
Carbon Monoxide	0 – 500ppm	30ppm low alarm
		50ppm high alarm
Hydrogen Sulphide	0 – 100ppm	10ppm low alarm
		20ppm high alarm

It has the capability of continuous monitoring for up to 20 hours with a rechargeable Li-ion battery. The unit also has an alkaline battery backup.

The QRae has data logging capabilities along with both average and peak values being recorded for each sensor.

For further information on either the PID or QRae, the supplier and servicing agent for Rae systems instruments – Active Environmental Solutions should be contacted on _____

AP2C

The AP2C is a flame spectrophotometer for gas detection.

In essence, it has the capability of detecting Sulphur and Phosphorous based chemicals. It was primarily developed for CWA (Chemical Warfare Agent) detection and as such is a very sensitive detection device.

Nerve gases are detected by analysing the emission spectrum if phosphorous is contained in the gases, whereas, mustard gases are detected by analysing the emission spectrum of sulphur contained in the gas. In addition, highly toxic nerve gases such as Vx are detected by the simultaneous analysis of phosphorous and sulphur spectral emission.

The instrument has the following main characteristics:

- A continuous air sampling (80l/h)
- A fast response
- It is unaffected by humidity
- Sulphur, phosphorous based chemicals can be simultaneously detected

For further information on the capabilities of the AP2C, Point Trading, the distributor and servicing agent, should be contacted.

The ACTFB utilised these atmospheric monitors during the evolution of the Mitchell fire.

No readings of significance are evident on the down loaded data log of instruments used, as well as the written records on the associated maps.

The identified sites indicated on the maps were sites where detection was carried out. They represent areas that were inside and outside the exclusion zones, and confirm that at the time of the respective measurements, there were no readings of significance, **within the capabilities of the monitoring devices.**

It should be noted that the above instruments are capable of detecting a wide range of chemicals (refer to the attached lists); however, they are unable to identify the specific vapours or compounds encountered.

In addition to the ACTFB's detection regime;

- FRNSW utilised PID's with an 11.7eV lamp which allows for a wider range of compounds to be detected.
- EPA performed some soil and water testing.

UNIT #3 PID ppm 3000

==========Event #37 information (begin)==========

[Event #37 name:]--[Event #37]15-09-2011 23:40<-->16-09-2011 02:20

[Event start time:]--15-09-2011 23:40:44[Event end time:]--16-09-2011 02:20:44

==========Event #37 head information==========

Product Name: MiniRAE 3000 Model Number: PGM-7320 Serial Number: 592-903773

Data Points: 160 Sample Period: 60 s Datalog Mode: Automatic

SITE ID: RAE00002 USER ID: 00000001 Op Mode: Hygiene Mode

Sensor Information	: PID-Avg(ppm)	PID-Max(ppm)	PID-RLT(ppm)
Measurement Gas	: Isobutene		
Calibration Time	: 2011-07-22 21:02:002011-07-22 21:02:002011-07-22 21:02:00		
Drift Value	: ---	---	---
Low Alarm Levels	: 50.000	50.000	50.000
High Alarm Levels	: 100.000	100.000	100.000
Span Value	: 100.000	100.000	100.000
Correction Factor	: 1.00	1.00	1.00
Over Alarm Levels	: 15000.000	15000.000	15000.000

==========Event #40 information (begin)==========

[Event #40 name:]--[Event #40]19-09-2011 12:33<-->19-09-2011 14:09

[Event start time:]--19-09-2011 12:33:23[Event end time:]--19-09-2011 14:09:23

==========Event #40 head information==========

Product Name: MiniRAE 3000 Model Number: PGM-7320 Serial Number: 592-903773

Data Points: 96 Sample Period: 60 s Datalog Mode: Automatic

SITE ID: RAE00002 USER ID: 00000001 Op Mode: Hygiene Mode

Sensor Information	PID-Avg(ppm)	PID-Max(ppm)	PID-RLT(ppm)
Measurement Gas	Isobutene		
Calibration Time	2011-07-22 21:02:00	2011-07-22 21:02:00	2011-07-22 21:02:00
Drift Value	---	---	---
Low Alarm Levels	50.000	50.000	50.000
High Alarm Levels	100.000	100.000	100.000
Span Value	100.000	100.000	100.000
Correction Factor	1.00	1.00	1.00
Over Alarm Levels	15000.000	15000.000	15000.000

UNIT 1. PID ppm 3000.

==========Event #57 information (begin)==========

[Event #57 name:]--[Event #57]16-09-2011 23:40<-->16-09-2011 23:57

[Event start time:]--16-09-2011 23:40:47[Event end time:]--16-09-2011 23:57:47

==========Event #57 head information==========

Product Name: MiniRAE 3000 Model Number: PGM-7320 Serial Number: 592-902086

Data Points: 17 Sample Period: 60 s Datalog Mode: Automatic

SITE ID: ACT FB USER ID: 01 Op Mode: Hygiene Mode

Sensor Information	: PID-Avg(ppm)	PID-Max(ppm)	PID-RLT(ppm)
Measurement Gas	: Isobutene		
Calibration Time	: 2011-09-08 08:50:00	2011-09-08 08:50:00	2011-09-08 08:50:00
Drift Value	: ---	---	---
Low Alarm Levels	: 50.000	50.000	50.000
High Alarm Levels	: 100.000	100.000	100.000
Span Value	: 100.000	100.000	100.000
Correction Factor	: 1.00	1.00	1.00
Over Alarm Levels	: 15000.000	15000.000	15000.000

EMERGENCY INCIDENT

TITLE
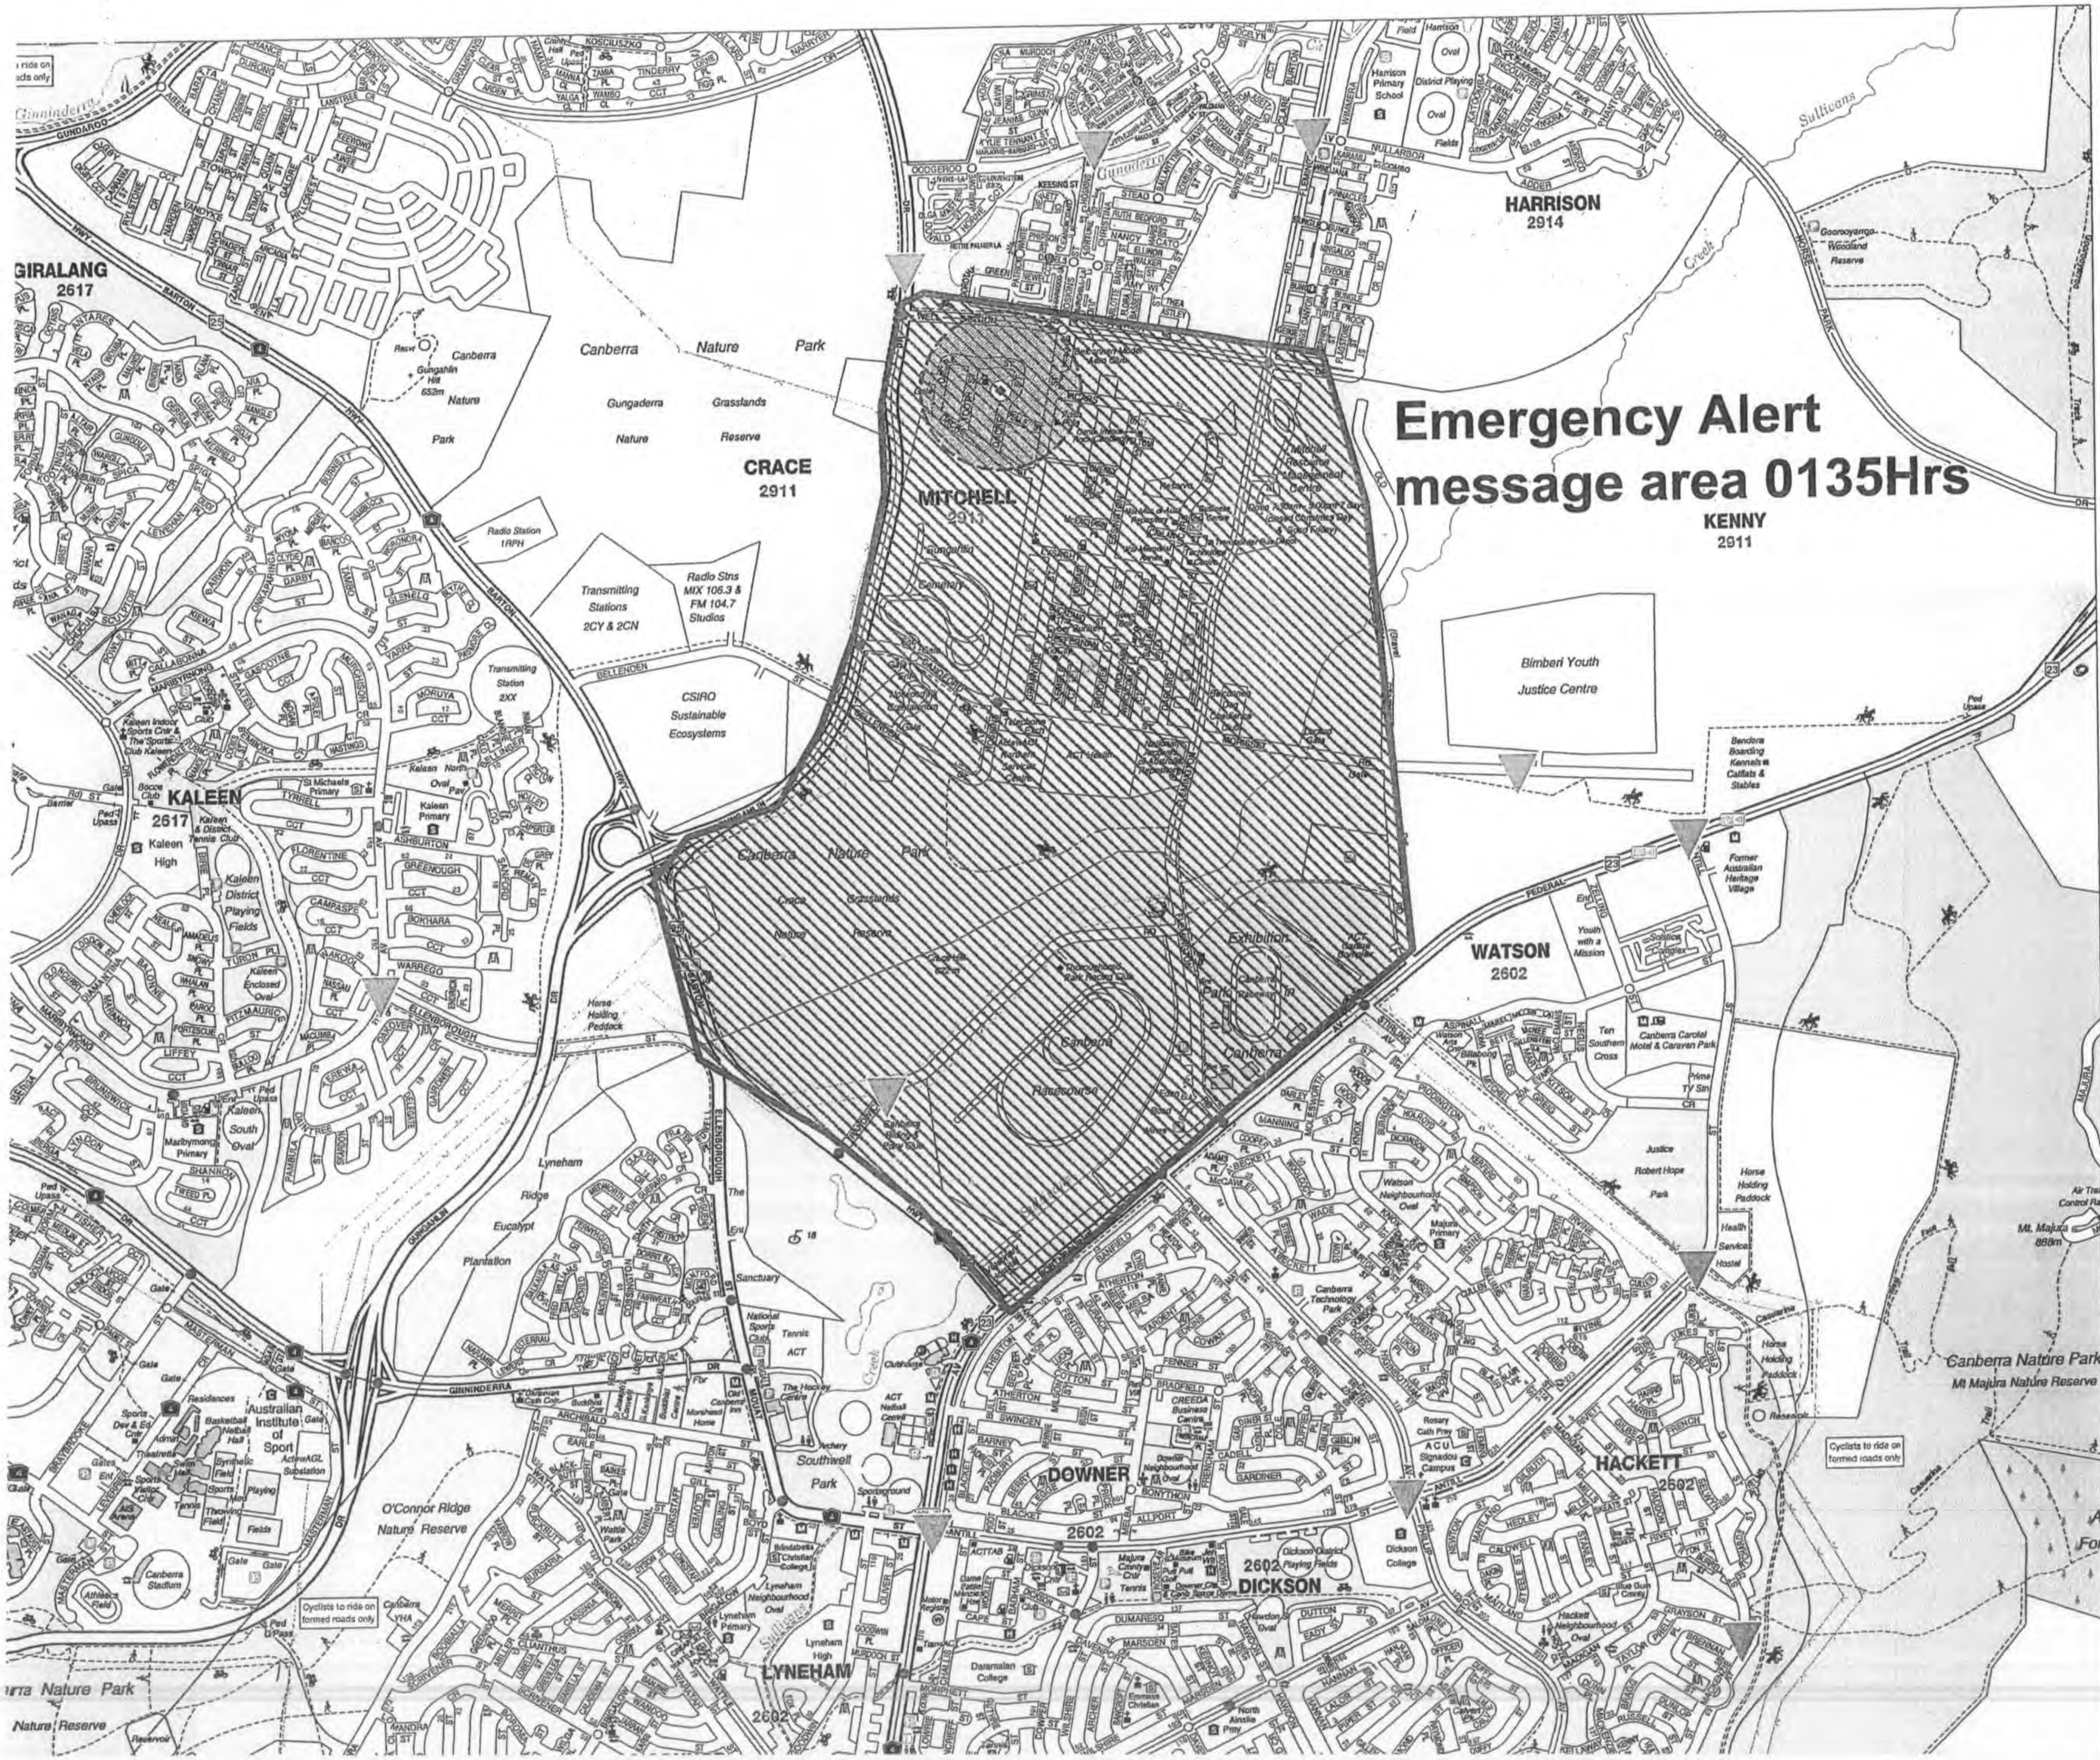
Evacuation Map as at 0900Hrs

DATE
16/9/2011 0900Hrs

NOTES
Stop sign = road closed point duty
red area = evacuation area
CC = command post

m 50 100 150 200

PROGRAM VERSION
HAZMAT II1.1 28JAN2011



EMERGENCY INCIDENT 171

TITLE
HazMat Incident
Air test sites

DATE
9/16/2011 0415

NOTES
Green points are test sites
Red area = evac area
Inner red = 300m buffer of fire

0200 – 0
0530 – 0
1250 – 0
EPA + ACTFB (ffground)

Atmospheric Monitoring 12.50pm
