Please provide/confirm general notes and caveats required to better understand your state data

TCH consists of PSU - 30 available beds, Calvary consists of 2N - 20 available beds and OPMH-IU (Older Persons) 13-15 available beds between 2008 and 2011. Generally, while Calvary Units could potentially use seclusion the usual strategy is to transfer the patient to PSU at TCH depending on presentation and the patients needs/safety requirements. TCH is more suited to providing a more secure environment and is a larger facility. In the majority of inpatient episodes where the legal status is involuntary at admission the patient will go directly to TCH. The patient may then be transferred at a later time to Calvary to continue the same inpatient episode as a voluntary patient once their legal status has been reviewed.
