

Appendix D 2003 Survey plot photographs

During the 2013 surveys, a photograph was taken looking out across each survey plot, including the corner post in the view, so that future surveys are able to more easily locate the sites and orientate the quadrat correctly. These photographs are presented in the table below.

Appendix E Yearly survey plot photopoints

Each year, photographs are taken at each survey plot from the main corner post facing outwards, along the step point transect. In addition, a ground cover photograph is taken from the same location, facing directly downwards and including a 1 x 1 metre metal-framed quadrat in the photograph. These photographs visually document the changes in the ground cover and vegetation from year to year. They can also assist in relocating and orientating the sites for subsequent surveys.
